DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities:

On line 16, page 6, the word "invention" is missing in the expression "The present involves a method ...".

Claim Objections

Claim 1 is objected to because of the following informalities:

As to claim 1, the acronym "FFT" should be defined fully to overcome the indefiniteness (i.e. Fast Fourier Transformation).

Appropriate correction is required.

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter:

Ku et al (US Patent 4,791,590) teach a high performance signal processor wherein obtaining a communication signal comprising a set of data points and signal characteristics, enabling an output division of the communication signal data points enabled during the first communication signal transmission, determining a maximum output communication signal sampled during the first signal transmission, and adjusting scaling responsive to the maximum output determination. The prior art of record fails to

Art Unit: 2631

teach predicting a maximum output signal during a second signal transmission using the signal characteristics of the communication signal during the first communication signal transmission, calculating a number of unnecessary output divisions for each output stage of the FFT system during the second signal transmission, the number of unnecessary output divisions determined from the predicted maximum output signal during a second signal transmission and from the maximum output communication signal sampled during the first signal transmission and disabling selectively the output stage division for at least one output stage of the FFT system during the second signal transmission using the number of unnecessary output divisions determined in the calculating step.

Conclusion

This application is in condition for allowance except for the formal matters described above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.
